**IT WASN'T UNTIL 2020** that niche terms like PPE and N95 suddenly went mainstream, making headlines and becoming household words. But at Makrite we have been in the business of personal safety and protection for decades—since developing our first exceptional face masks in 1984, well before the global pandemic forced everyone, everywhere to pay attention to respiratory health.

Today our products are in high demand in medical, industrial, automotive and consumer environments worldwide. We have a reliable track record of keeping people safe and productive while keeping costs low.

That's why the National Institute for Occupational Health and Safety (NIOSH) stands behind more than 75 of our disposable respirator products, produced using specially designed, high-tech equipment. This guarantees a superior level of quality and consistency with each face mask we produce. In fact, Makrite products have earned similar approvals—including EN149/CE—from European governments and agencies, along with regulatory bodies in countries such as Japan, Korea and Australia.

We're based in Taiwan, with significant satellite offices in the US, China, Korea and Japan. As the largest private brand manufacturer of disposable respirators for the North American market, Makrite supplies major US retailers and a wide range of other well-known companies that value our reliable customer service, dependable quality and competitive pricing.

After four decades of R&D, we welcome opportunities to further develop our products to meet the changing needs of the industries and partners we serve. We look forward to doing the same for you.

## OUR MISSION

**To make the best-quality products and serve customers' needs through exceptional service and competitive prices.**

Makrite meets all major global approval standards for respiratory protection.

# WHY CHOOSE MAKRITE?

As with any business decision, there are plenty of factors to consider. We see these as among the most important:

### Highest-quality products

Our top priority is to provide you with the best possible disposable respirators. We do this by investing a lot of time and energy in our initial product designs and development. We then ensure that each and every respirator is produced to our exacting standards using sophisticated, specially designed equipment. Our quality control and laboratory testing departments complete the process so that we consistently ship the same product every time you order.

### Globally competitive pricing

Our pricing is value-oriented, guaranteeing a high-quality product that meets rigorous NIOSH and other government-approved standards at very competitive prices in the US and elsewhere around the world. And while we may not be the lowest priced manufacturer in Asia, given the number of major companies that turn to us for private brand respirators, we are the most significant and reliable one.

### Private brand packaging

Many of our customers market our products in their own brand packaging. We encourage this since it enables you to sell the best respirators in the world with your company's name on the mask and packaging. When you order from Makrite, both the smaller inner boxes with the masks and the outer shipping cartons are branded with your company's name. Plus the only place your customers can purchase the product is through your company.

### Unbeatable customer service

At Makrite we offer only the highest levels of service and support to customers around the globe. We provide prompt and personal responses to all of your questions, comments and concerns. Regardless of where you are or how large or small your concern might be, we invite you to call us at **1-800-379-9929** or email us at [info@makritenorthamerica.com](mailto:info@makritenorthamerica.com). We take care of the rest.

### Unmatched technical support

When you do business with Makrite, we are your support team. We work diligently to answer all of your technical questions within 24 hours or less.

### Excellent marketing & sales support

We also help your business by offering services such as product training programs, product photos, catalog preparation assistance, strategic discussions and more.

### Retail packaging options

All of our respirators and other face mask products are available in a wide range of packaging options to meet your needs—and those of your customers. These include clam shells, polybags with header cards, blister cards and more. We also offer customizable vending packs of one or two respirators in a bag with an instruction sheet.

# PRIVATE BRAND PROGRAMS

## Developing successful branded products for customers worldwide

As an example, Makrite will take the following steps to guide you through the NIOSH private brand approval process in the US:

### Application

We extend our factory NIOSH approvals to our customers by way of a detailed application that we prepare and submit to the agency on your behalf.

### Artwork

During this process, we provide you with a digital copy of the box we design to hold your branded respirators. We provide you with NIOSH requirements and work together to guarantee that proper labeling, fitting instructions and other details are included on your packaging.

### Approval

Once your application is submitted and approved, NIOSH provides us with an official label and certification letter confirming that you can sell these N95 respirators in your own brand packaging. You can add the NIOSH label to your box, if you wish.

### Production

As soon as the approval comes through, we begin manufacturing your order.

### Shipping

We are happy to handle the logistics of shipping directly from our factories to your warehouse. Or you're welcome to arrange for your own shipping, if you prefer.

## FREE SALES TRAINING PROGRAMS

We offer helpful support programs designed to teach your internal/external sales teams how to use and effectively promote these products.

The 9600 Comfort Series, our newest line of NIOSH-approved respirators, offers a modified shape designed to fit more workers in any given workplace. This model easily meets NIOSH's stringent requirements for breathing resistance and filtration efficiency, and is also foldable for easy storage in a pocket. Most companies interested in N95 respirators select either our 9500 Comfort Series, the alternative MK Comfort Series or this newer 9600 line for the comfort and flexibility they offer employees.

high-density urethane foam

\*Also available with carbon layer for protection against nuisance-level acid gas

The 9500 Comfort Series is our “standard” NIOSH-approved disposable mask—by far the most widely used model for all work environments. It readily meets NIOSH’s stringent requirements for breathing resistance and filtration efficiency, and given its reliability and cost, is traditionally our most popular product.

\*\*Also available with carbon layer for protection against nuisance-level acid gas

As an alternative to our 9600 and 9500 models, the MK Comfort Series offers a flanged edge around the full circumference of the mask to create a tighter seal to the face for some users. We also redesigned the inside nosepiece with a thinner, longer strip of PVC foam, which some wearers prefer. This model comes with a square exhalation valve to help further differentiate it from our 9600 and 9500 Comfort Series.

Especially popular in the food service industry, the Envi Series is made without using any metals so that it's environmentally friendly. The soft, preshaped nose area ensures excellent fit for various face sizes and shapes, adjusting to the wearer's nose bridge for a proper fit. Further adjustment is available through the looping style headstraps, which allow the mask to be put on and off easily, and draped around the neck when not in use. In addition, the mask's soft inner layer and low breathing resistance provide for maximum comfort.

Hybrid Style

Our Fit-N95 respirator (with or without an exhalation valve) combines features of both the cone and flat-folded styles of respirators. The flexible edges conform to most wearers' facial features to create a tight but comfortable seal, while the fold-out front offers distance from the mouth as in traditional cone-style masks.

<b>*Cleared by the Food and Drug Administration for use as a Surgical N95 Respirator, FDA 510(k): K020474</b>				

In North and South America, about 25% of wearers prefer vertical- and flat-folded respirators—and this number is growing every year. Some individuals opt for these styles because they're more flexible around the edges and can adapt to the wearer's facial features—often more easily than does a cone-style mask. This mask folds easily down the middle when not in use and fits well with goggles or helmets, making it convenient for many different types of work environments.

NEW FEATURE

NEW PRODUCT

Specifically designed to protect against metal fumes (including ozone), these respirators feature a very smooth inner surface, fully adjustable headstraps, a full inner face seal, a flame-retardant outer layer and a preformed nose area with an adjustable aluminum nose clip. Together these features contribute to a comfortable, reassuring safety mask that workers welcome.

Our new N95-710VOV with exhalation valve includes a full inner PVC foam face seal and silicone adjustment tab on the top strap for a secure personal fit. The N99 provides greater than 99% filter efficiency protection against non-oil-based particulates and our R95 respirators provide greater than 95% filter efficiency against oil and non-oil-based particulate aerosols. The R95 is somewhat resistant to oils, according to NIOSH standards. Different versions are also available with a layer of activated carbon for nuisance odor relief and an exhalation valve for easy breathing.

Makrite manufactures more than 80 models of disposable respirators (several highlighted below) officially approved for use in European Union countries and others that follow the CE respirator protocols. These respirators meet all levels of EU safety standards (including FFP1, FFP2 and FFP3) and can be used with a variety of head- and hearing-protection products.

While we produce models without exhalation valves for work environments that pose no breathing challenge, we also offer masks with high-functioning exhalation valves for extra comfort in hot and humid work conditions. Respirators may be purchased with a variety of headstraps, a wide range of other comfort features and a carbon layer for relief from nuisance odors.

Especially popular in the food service industry, the Envi Series is made without the use of any metals so that it's environmentally friendly. The soft, reshaped nose area ensures excellent fit for various face sizes and shapes, adjusting to the wearer's nose bridge for a proper fit. Further adjustment is available through the looping style headstraps, which allow the mask to be put on and off easily, and draped around the neck when not in use. In addition, the mask's soft inner layer and low breathing resistance ensure maximum comfort.

Our FIT Comfort Series (available with or without an exhalation valve) combines features of both the cone style and flat-folded style respirators. The flexible edges conform to wearers’ facial features with a tight but comfortable seal, and the fold-out front allows for the same distance from the mouth as in traditional cone-style masks.

Also popular for their fit and flexibility, lightweight vertical-fold respirators are designed to allow for unobstructed vision. They are available in a wide range of options (as shown in the chart below) that provide protection for a variety of industrial applications. Workers appreciate that they fold easily for storage in a pocket when not in use.

Both our cup-shaped MK Comfort Series and vertical-folded 300 Comfort Series respirators are approved for use in Australia and New Zealand (granted AS/NZS 1716:2012, which “supersedes” Standards Australia’s occupational respiratory protection requirements). The MK Comfort Series has a softer inner layer, adjustable nose clip and flanged edge for a secure facial seal. Soft to the touch, the 300 Comfort Series is exceptionally easy to wear. Both models feature ultrasonically welded headstraps that provide a strong seal and can withstand heavy use.

# MEDICAL/SURGICAL MASKS & RESPIRATORS

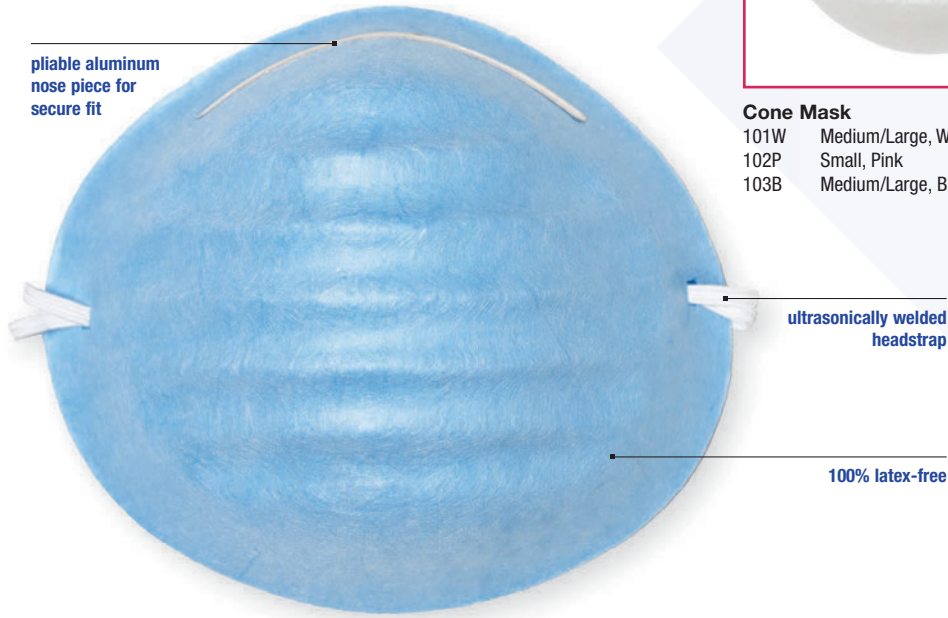

N95 respirators and surgical masks are examples of personal protective equipment that are used to protect the wearer from particles or from liquid contaminating the face.

In addition to medical, dental and individual use, these face masks are also helpful for a variety of other applications. For example, face masks are widely used in industrial settings, the food service industry, agriculture, laboratories and DIY home improvement, among other markets. These products offer our industrial customers an economical way of expanding sales into other markets.

## CONE MASKS FOR GENERAL USE

Surgical N95 respirators are examples of personal protective equipment that are used to protect the wearer from particles or from liquid contaminating the face. In addition to meeting NIOSH N95 standards, these products also pass additional testing for fluid resistance, flammability and biocompatibility. The Food and Drug Administration (FDA), Centers for Disease Control and Prevention (CDC) and the National Institute for Occupational Safety and Health (NIOSH) together regulate these respirators.

# PROTECTIVE MEDICAL SHIELDS & EYEWEAR

Protective medical shields and eyewear are designed to help protect healthcare professionals and patients from pathogens and bodily fluids. All shields are made with lightweight optical grade film and designed to offer maximum comfort and protection.

## PROTECTIVE MEDICAL SHIELDS & EYEWEAR

**EARLOOP MASK WITH EYESHIELD**

- combination flat mask and shield
- distortion-free, optical grade shield with anti-fog coating
- high-filtration, latex-free mask
- offers eye protection from splashes
- foam band on top of shield adds comfort

ITEM	STRAP STYLE
3100	earloop

25/box; 4 boxes/case

**EARLOOP MASK WITH EXTENDED EYESHIELD**

- combination flat mask with extended shield
- offers extra protection from splashes
- same high-quality shield and features as our 3100 mask
- available with tie-on straps

ITEM	STRAP STYLE
3300	earloop
3310	tie-on straps ( <i>not shown</i> )

25/box; 4 boxes/case

**EARLOOP MASK WITH ANTI-GLARE EXTENDED EYESHIELD**

- combination flat mask with virtually glare-free extended shield
- high-filtration mask
- available with tie-on straps

ITEM	STRAP STYLE
3300-AG	earloop
3310-AG	tie-on straps ( <i>not shown</i> )

25/box; 4 boxes/case

**ECONOMY TIE-ON MASK/SHIELD**

- shipped direct from the factory in China
- latex-free/optically clear
- very economical
- earloop straps available

ITEM	STRAP STYLE
EP703BT	tie-on straps
EP703BE	earloop ( <i>not shown</i> )

50/box; 4 boxes/case

**GOGGLE EYESHIELD**

- one size fits all
- foam cushions across the forehead/bottom
- highest-quality optical grade film
- proprietary anti-fog coating
- includes comfort stretch headband

ITEM
5101

25/box; 4 boxes/case

**CONE MASK WITH EYESHIELD**

- combination cone style mask and shield
- same high-quality features as our 3100 mask
- colors: blue and pink (smaller size)

ITEM	MASK COLOR
3400	blue
3410	pink ( <i>not shown</i> )

25/box; 4 boxes/case

**FULL FACE SHIELD**

- designed to offer maximum protection for the entire face
- face mask should be used under the shield
- easily fits over glasses and masks
- adjustable velcro headband or stretch band
- available in full or half shield

ITEM	SHIELD STYLE
4000	full shield
4100	half shield ( <i>not shown</i> )

25/box; 4 boxes/case

**ANTI-GLARE FULL FACE SHIELD**

- anti-glare coating
- offers maximum protection for the entire face
- easily fits over glasses and masks
